

## **TILYS® BIOTECH ADAPTERS EFFECT ON WATER**

Below is a graph illustrating the Tily's® Biotech Adapters effect on water. This was a test conducted in-house by our R&D Director, Pierre Nicolas.

First, a syringe is filled with medical-grade water that has a similar composition to human plasma\*. The same syringe of water is used in all 3 consecutive tests. Each dot on the graph represents a 30 sec increment and the duration of each test is approximately 15 minutes. The GDV machine\*\* is used in all the 3 samples to measure the bio-photon activity\*\*\* of the water. The test was conducted in an EMR protected laboratory. The cell phone used in this test is an Android smartphone. This test was conducted using the 2<sup>nd</sup> Generation of Biotech Adapters.

GDV Machine Recording Bio-Photon Activity of Water Subject to Cell Phone

TEST 1: The **Green Line** measures the bio-photon activity of the water which is not subjected to a cell phone. The **Green Line** is used as the baseline.

TEST 2: The **Red Line** measures the bio-photon activity of the water when subjected to an active cell phone\*\*\*\* without the Tily's® Biotech Adapters.

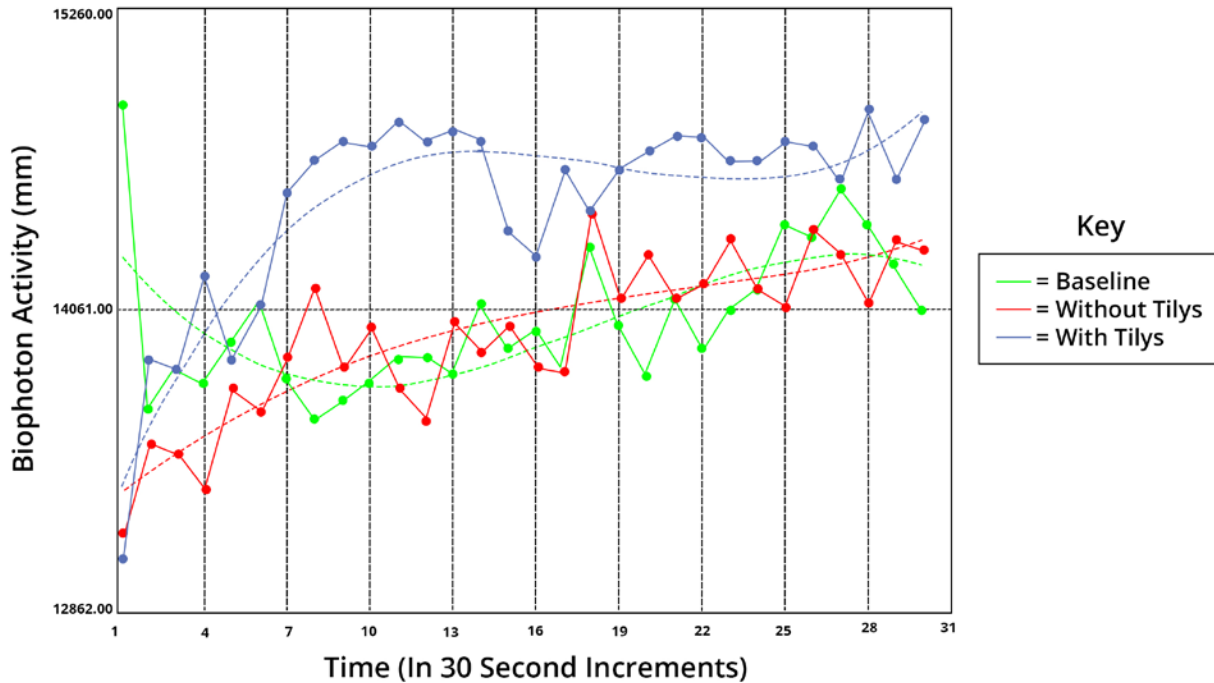

TEST 3: The **Blue Line** measures the bio-photon activity of the water when subjected to an active cell phone\*\*\*\* equipped with the Tily's® Biotech Adapters.

As you can see from this graph, the water, not subjected to any outside stimulus (**Red Line**), started off with a high bio-photon activity and quickly dropped off. The drop-off is due to the GDV measuring device using electricity that creates EMR.

The water subjected to EMR from an unprotected active cell phone (**Blue Line**) clearly shows very poor bio-photon activity.

The water subjected to EMR from an active cell phone\*\*\*\* with the Tily's® Biotech Adapters (**Green Line**), on the other hand, starts with a low bio-photon activity and quickly increases and then holds fairly steady at the same high level of bio-photon activity that the water not subjected to any EMR started with.

## Tilys Biotech Adapters Effects on Water Molecules

It should be noted that the bio-photon activity in the water was restored in TEST 3 after it was severely corrupted in TEST 2. This is why the starting point for TEST 2 and 3 are the same.

In conclusion, water (such as the 70-80% that comprises the human body) exposed to EMR that is subjected to the Tilys® Biotech Adapters has a similar bio-photon activity as unfettered water from the source.

\*Medical-Grade Water: Quinton Hypertonic water. For more information look at [Quinton.com](http://Quinton.com)

\*\*GDV Machine: A Russian instrument that measures the relative bio-photon activity. Invented by Korotkov. For more information go to [www.Korotkov.eu](http://www.Korotkov.eu)

\*\*\*Bio-Photon Activity: Literally means light energy. It is the subtle energy that all living cells produce and the current (energy) produced by water at the source.

\*\*\*\*Active Cell Phone: Meaning that the phone has been called from an outside line and remained on through the duration of the test.
